__/__/__

⇒ Algorithm Linear_Search (A, n, key)

input :

A → array of elements

n → no. of elements in array

key → element to be searched

output :

position of key if found

otherwise return -1.

Step1: for i ← 0 to n-1 do

Step2: if A[i] == key the

Step3: return i

Step4: end for

Step 5: return -1

End Algorithm

TC: Best case : O(1)

Avg case : O(n)

Worst case : O(n)
